2. On the morning of July, three artillery pieces, broken down and towed by six caterpillar tractors, were seen leaving the Commister Kaserne through the north gate. The gun barrels, which	
two exite limbers, were 152-mm or larger and from 3% to 4 meter undercarriages of the gun mounts were from 5 to 6 meters long with tarpaulins. * 1 * Comment. Soviet Army artillery pieces which are transpor for long hauls are the model 1935 152-mm gun, the model 1931 2 and the model 1939 280-mm howitzer. The two-axle limber with scarrying the gun barrel, as described in paragraph 2, is stand The gun mounts have caterpillar tracks, but the special limber gun barrels do not as is stated in paragraph 1. The calibers s	rested on rested on rested on two loads colored red on two loads
